G-MB - 1/64
3 January 1963
Copy 1

MEMORANDUM FOR: Chief, Military Division, OCI

ATTENTION :

THRU : Chief, RG/RB/CGS

FROM : Chief, CIA/PID (NPIC)

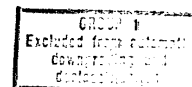

SUBJECT : Ground Installations, Border Zone, Far East Military District, USSR

REFERENCE : Requirement No. C-C13-80,401 (Project No. C 1026-63)

1. In partial fulfillment of Requirement No. C-C13-80,401 (C 1026-63), a study was made from all available aerial photography through KEYHOLE October 1963, of the Sino-Soviet border area from Khabarovsk to North Korea in order to provide descriptive analysis of identifiable Soviet ground forces installations and to determine, if possible, the size, type, and status of the unit garrisoned. This report does not include the Khabarovsk complex or those installations in support of a missile, or naval activity.

2. This requirement was partially fulfilled by previous memorandums from this office (GMB 517/63, 14 August 1963 dealing with the Blagoveshchensk-Belogorsk Military Area and GMB 612/63, 27 September 1963 dealing with military installations in the border zone of the Trans-Baikal Military District). This memorandum is the final report under this requirement.

3. The analysis of the Border area resulted in a tabulation of the major military installations, a breakdown of each into its component parts and a detailed description of the facilities. All installations were active but a determination of strength could not be made due to scale of available photography. Because of the magnitude of the project no effort was made to furnish detailed mensural data; but a listing of all detailed reports which presents such information is included as an attachment to this memorandum. Submitted herein are annotated photographic enlargements and line drawings of all the major military installations, annotated maps showing their location in relation to the Sino-Soviet border, a listing of reports and maps, and a list of detailed description.

~~TOP SECRET RUFF~~

4. Forwarded for your retention are 20 annotated enlargements (CIA/PID/GMB/P-4/64 thru P-22/64), 21 line drawings (CIA/PID/GMB/P-4/64A thru P-22/64 A) and 2 annotated maps (CIA/PID/GMB/P-23/64 and P-24/64) and a list of corresponding descriptions.

5. The photo analysis on this project was performed by [redacted] CIA/PID/GMB (NPIC), who may be contacted on [redacted] for any additional information.

25X1
25X1

6. This memo with enclosures completes the referenced requirement.

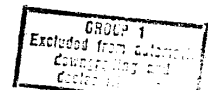

25X1

ENCLOSURES:

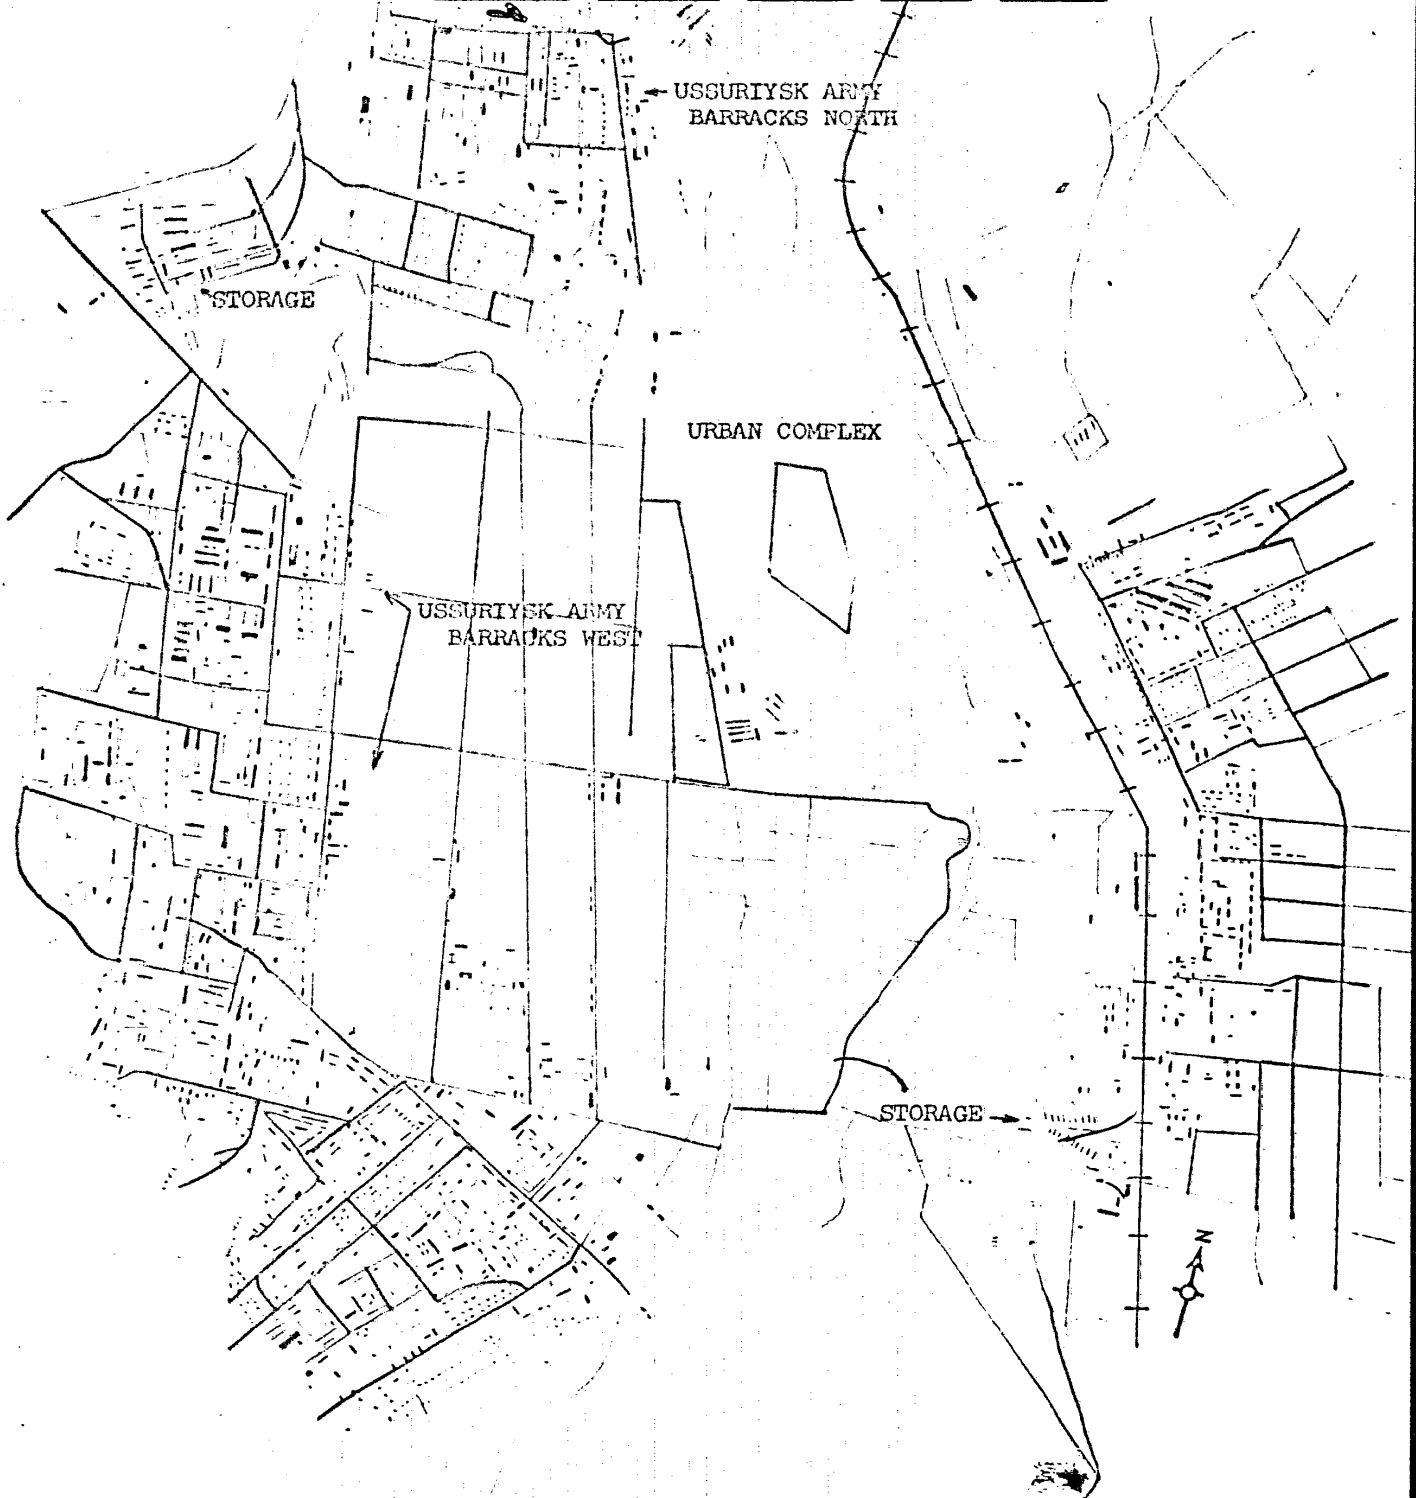

- a. 20 enlargements (CIA/PID/GMB/P-4/64 thru P-22/64)
- b. 21 line drawings (CIA/PID/GMB/P-4/64A thru P-22/64A)
- c. 2 maps (CIA/PID/GMB/P-23/64 and P-24/64)
- d. List of descriptions

TOP SECRET RUFFSOVIET GROUND INSTALLATIONS, BORDER ZONE
FAR EAST MILITARY DISTRICT

The following military installations were identified from Keyhole photography of the Sino-Soviet border area south from Khabarovsk to the Korean border. The military activity within the Khabarovsk complex and installations in support of missile, air, or naval activity are not included in this report.

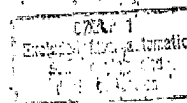

Item 1. BIKIN MILITARY BARRACKS

46 48N-134 16E

A military installation is located on the southeast edge of Bikin, 135 NM south of Khabarovsk and 9 NM east of the Sino-Soviet border. The Order of Battle lists this area as the location of the 77th Border Detachment, Far East Border District. The overall size and configuration of the installation plus the associated training activity suggest a probable Mechanized Regiment (see annotated photo and line drawing).

The installation consists of separate administrative, barracks, and storage/support areas. The billeting area contains 6 medium-sized barracks of an undetermined number of stories, and 12-14, multi-storied medium-sized barracks. Four additional barracks-type buildings are located adjacent to an athletic oval. The administrative area contains two large "U" shaped buildings and numerous small support buildings. A large storage area, located adjacent to the administrative area, contains 8 large conventional storage buildings and numerous small probable storage/support buildings. A secured, road served, probable ammo storage area containing four storage buildings and a probable support building is located on the southwest edge of the installation. Two secured vehicle maintenance and storage areas are located near the administrative and support areas. Each area contains three long maintenance buildings and an open storage area. Extensive track activity extends from these areas to a large driver training course and moving target range southeast of the installation. Comparative photographic coverage evidences apparent continuous operations at the driver training course and the firing range.

A second driver training course and a probable firing range were identified 7 NM west of Bikin, along the north bank of the Bikin River, within 2 NM of the border. Haze and cloud conditions on available photography preclude a determination of possible association with the Bikin Military Installation or the presence of a separate support facility. This training area appears to have been developed since Spring 1962.

TOP SECRET RUFF

TOP SECRET RUSS

Item 2.

IMAN - SEBUCHAR MILITARY BARRACKS 45 49N-133 38E

A military installation is located 9 NM SSW of Iman; 150 NM SSW of Khabarovsk, and 160 NM NNE of Ussuriysk. The Order of Battle lists this area as the location of the 57th Border Detachment, Pacific Ocean Border District. The overall size and configuration of the installation plus the associated training activity suggest a probable Motorized Rifle Regiment (see annotated photo and line drawing).

The installation consists of three separate administrative/billeting areas and a large training area. The main area contains 29 probable single story barracks-type buildings, 4 large administrative buildings, 6 large storage buildings and numerous support buildings. The northern-most area located one NM north of the main area consists of 9 medium-sized administrative/barracks-type buildings and a number of small support buildings. Although connected with the remainder of the complex, this area may serve a civilian agricultural function rather than military. The third area is located one NM SE of the main area and serves a probable support function for the nearby training facility. It consists of a large "7" shaped and a large "U" shaped administrative buildings, 9 probable multi-storied barracks-type buildings, 5 large storage buildings, 16 support/storage buildings, and a secured vehicle maintenance and storage area containing 2 large rectangular buildings and an open storage area.

Extensive track activity connects the vehicle maintenance area with two large driver training courses located immediately to the west. A firing range is located one NM SE of the support area. The range facility contains approximately 9 support buildings and a small figure "8" probable driver training course. The flat trajectory impact scars and size of the range suggest possible medium calibre anti-tank weapon training. A secured, road-served, soft MRM site is located 2 NM SE of the support area.

IMAN - LAZO EAST AGRICULTURAL COMPLEX 45 52N-133 40E

The Iman - Lazo complex is located 5 NM SSE of Iman and 4 NM NNE of Sebuchar. The billeting area was previously reported as a military barracks area (October 1962); however, analysis of the most recent available photography identifies this complex as being agriculturally oriented. The area contains civilian billeting and open and covered agricultural storage. No military training activity was identified in the vicinity (see line drawing).

Item 3.

LESZAVODSK SUSPECT MILITARY INSTALLATION 45 28N-133 37E

A road served complex is located on the SE edge of Leszavodsk, 120 NM NNE of Ussuriysk. The Order of Battle carries no listing

TOP SECRET RUSS

TOP SECRET

for Ilesozavodsk. As this installation lacks the military housekeeping, uniformity, security, and associated activities observed at known Border installation, it is doubtful that this facility is associated with either the Far East Military District or the Pacific Ocean Border District (see annotated photo and line drawing).

The administrative/billeting area contains from 8 to 10 medium-sized, barracks-type buildings, a large administrative-type building, 5 large storage-type buildings, and numerous support buildings. Analysis of the most recent photography indicates a high degree of agricultural activity throughout the area.

An area of earth scarring east of the area has been reported as a training area; however, the configuration of the scarring, the lack of defined courses, and the absence of identifiable weapons activity is not compatible with known training areas. The trackage in the area appears to be connected with the agricultural activity rather than directly with any support buildings in the complex.

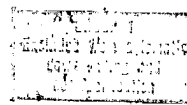

Item 4. MANZOVKA (MONASTYRISHCHE) MILITARY INSTALLATION 44 12N-132 29E

A road and partially rail-served military installation is located on the east edge of Manzovka, 35 NM NE of Ussuriysk. The Order of Battle carries no listing for Manzovka (see annotated photo and line drawing).

The installation contains separate administrative, billeting, support and storage facilities. The administrative/billeting area contains 12 probable multi-storied, administrative/barracks-type buildings, a large "U" shaped and a large "T" shaped administrative-type buildings. The storage facility immediately north of the administrative area contains 5 large storage buildings, 7 smaller support-type buildings and a possible vehicle maintenance and storage area. A support area is located northwest of the administrative area and contains 11 possible barracks/support-type buildings, 2 storage buildings, a large irregularly shaped support building, and 4 quonset-shaped storage buildings. A road-served, secured storage area containing 4 buildings is located on the north edge of the installation. A probable training area is located immediately north of this storage area.

A SA-2 SAM site is located adjacent to the east of the installation. A separate road and rail-served SAM support/billeting area is located approximately one NM north of the missile site.

TOP SECRET

TOP SECRET RUF

This installation has undergone modification since the initial analysis of the area (December 1962). The lack of active training facilities and the large number of support-type buildings in relation to the size of the installation suggest a possible military logistical support or maintenance facility of Regimental size.

Item 5. KAMEN-RYBOLOV MILITARY INSTALLATION 44 49N-132 02E

A large military installation is located on the west shore of Lake Khanka, 60 NM NNW of Ussuriysk. The Order of Battle lists this area as the location of an unidentified Mechanized Division. The separation of the installation into component areas and the degree and type of training activity supports the identification of a probable Mechanized Division (see annotated photo and line drawing).

The installation consists of two separate administrative/support areas, separated by an extensive training area. Kamen-Rybolov Military Installation NE (44 45N-132 03E) is located on the NNE edge of the urban complex. The installation contains 15 multi-storied, barracks-type buildings, 5 administrative/barracks-type buildings, 4 probable support/barracks-type buildings, 50 large conventional storage buildings, a secured storage area containing 5 buildings, 3 large vehicle maintenance and open storage areas, and numerous smaller support buildings. Two athletic fields are located adjacent to barracks blocks within the installation.

Kamen-Rybolov, Troitskoye Military Installation is located 6 NM north of Kamen-Rybolov, on the south edge of Troitskoye. The installation contains 14 multi-storied, barracks-type buildings, 7 large administrative buildings, 16 large storage buildings, a secured vehicle maintenance and storage area, and numerous support buildings. Two secured storage areas, and 3 open storage area are located adjacent to the installation.

A large, extensively tracked, training area extends between the two installations parallel to the shore of Lake Khanka. The area contains a large, triangular shaped, tracked vehicle driver training course, approximately 12 to 15 support/storage buildings, and a secured probable ammo storage area.

Two moving target firing ranges are located 6 NM WNW of Kamen-Rybolov, Troitskoye (44 51N-131 57E). The firing ranges are of the type commonly identified with medium to heavy calibre anti-tank weapon training. A small, undeveloped possible driver training

TOP SECRET RUF

TOP SECRET ROST

course is located between the two ranges. A group of small support buildings is associated with the ranges.

PLATONO - ALEKSANDROVSKO MILITARY INSTALLATION 45 02N-131 58E

A military installation is located 25 NM north of Kamen-Rybolov, 85 NM north of Ussuriysk, and 2 NM south of the Sino-Soviet border. The Order of Battle lists the Porgrachnyy - Kamen-Rybolov area as the location of the 58th Border Detachment, Pacific Ocean Border District. The lack of any apparent association with the Kamen-Rybolov military installation, the size and configuration of the installation, and the proximity to the border suggest a probable Mechanized Regiment serving as a border detachment (see annotated photo and line drawing).

The installation contains 8 medium-sized, multi-storied barracks, 12 probable administrative/barracks-type buildings, 14 large storage buildings, 5 support/barracks-type buildings, a secured probable vehicle maintenance area, a secured ammo storage area, and 5 open storage areas. A probable armored firing range is located one NM west of the installation.

Item 6. SERGEYEVKA - KROSNOPOLYE PROBABLE MECHANIZED DIVISION REGIONAL TRAINING AREA

SERGEYEVKA MILITARY INSTALLATION 44 20N-131 40E

A military installation is located on the SE edge of Sergeyevka, 35 NM NW of Ussuriysk, and 20 NM east of the Sino-Soviet border. The Order of Battle has no listing for Sergeyevka. The proximity of the installation to an extensive mechanized training area and the ratio of vehicle maintenance, storage and support facilities to barracks areas, supports the identification of this installation as a military training support facility (see annotated photo and line drawing).

The installation consists of two separate areas: a large administrative/billeting and maintenance area situated on the SE edge of the Sergeyevka and a smaller billeting, maintenance, and storage area located one NM south. The larger area contains 12 probable multi-storied administrative/barracks-type buildings, 6 smaller possible single-story barracks-type buildings, a large "U" shaped administrative building, a large equipment maintenance and storage area and numerous support buildings. In addition 5 open storage areas, including probable revetted, partially underground storage, are located adjacent to the installation.

TOP SECRET ROST

TOP SECRET

The smaller area contains 5 large conventional storage buildings and 8 support buildings within a walled area, 3 probable multi-storied barracks buildings, a large secured equipment maintenance and storage area, and numerous small support buildings. Open storage areas are found throughout the area.

Large scale, high quality, photography of October 1963 permitted the identification of a number of possible field guns and their associated prime movers in the open equipment storage areas. These weapons include possible 152 mm howitzers; 85 mm, 100 mm and 130 mm field guns, and rocket launchers (truck mount, frame-type).

KRASNOPOLYE MILITARY SUPPORT INSTALLATION 44 12N-131 43E

A rail- and road-served military installation is located one NM east of Krasnopolye, 8 NM south of Sergeyevka, 30 NM NNW of Ussuriysk and 15 NM east of the Sino-Soviet Border. The Order of Battle carries no listing for Krasnopolye. The presence of extensive maintenance, storage, and support facilities and its proximity to, and well defined road connections with, an extensive training area support the identification of this installation as a military training support area (see annotated photo and line drawing).

The installation consists of 4 distinct areas: a billeting and maintenance/support area; a rail-served, off-loading and storage area; an administrative/support area which is under construction; and an open storage/support area. The billeting and maintenance/support area contains 4 probable multi-storied barracks buildings, 4 large conventional storage buildings, 3 large vehicle maintenance and storage areas, a secured storage area of undetermined function, numerous support buildings, and secured open storage areas. The off-loading and storage area contains 3 multi-storied administrative/barracks-type buildings, 18 large conventional storage buildings, a long, rectangular, off-loading dock, numerous support buildings and extensive open storage. The administrative/support area contains a large modified "U" shaped building, 6 barracks/administrative buildings, 7 support buildings and a large vehicle storage area. To the immediate NE is another probable vehicle open storage area containing 4 barracks/support buildings, numerous small support buildings, and unidentified construction activity.

Training Area (See detailed map)

An extensive Mechanized Unit training area, of approximately 80 square miles, extends from the vicinity of Sergeyevka, west

TOP SECRET

of the Ussuriysk - Sui Fen Ho Railroad, to SW of Krasnopolye. A probably related training area, of approximately 15 square miles, is located 8 NM SW of Krasnopolye and 4 NM NE of Novogeorgiyevka. The entire area is extensively tracked with the principle patterns radiating from the Krasnopolye vehicle maintenance and off-loading facility.

The main training area consists of 5 large, armor firing ranges, 3 of which are of the moving target type; a large tracked vehicle driver training course; numerous revetted firing emplacements, extensive evidence of infantry training activity, and two areas of tent platforms.

The Novogeorgiyevka training area contains a large moving target firing range and tracked vehicle driver training course. Construction activity of an undetermined type is identified 3 NM east of the firing range and driver training course. Roads and track patterns connect the Novogeorgiyevka training area with the main training area; however, the scale of available photography precludes a determination of the degree of association between these areas or the amount of infantry-type training being conducted. Trackage also extends into Novogeorgiyevka to a possible vehicle maintenance and storage area containing 4 large shed-type buildings. Additional firing activity and trackage is noted .5 NM west of the possible vehicle maintenance area, on the west side of the Sui Fen (Suyfun) River.

Item 7. CHERNYATINO MILITARY INSTALLATION

43 58N-131 29E

A military installation is located one NM west of Chernyatino, 22 NM WNW of Ussuriysk, and 9.5 NM east of the Sino-Soviet border. The Order of Battle carries no listing for Chernyatino. The size and configuration of the installation plus the associated activity support the identification of a probable Mechanized Regiment with supporting elements (see annotated photo and line drawing).

The installation contains 15 probable multi-storied barracks buildings, 3 probable multi-storied administrative buildings, 6 large administrative/barracks type buildings, 10 large storage buildings, and a vehicle maintenance and storage area containing approximately 12 buildings and an open storage area. A support area, containing approximately 8 buildings and a probable storage area containing 5 buildings are located on the west edge of the installation. A secured probable ammo storage area containing 5 buildings is located 1,000 yards NNE of the installation.

TOP SECRET RUFT

Extensive track activity extends from the vehicle support area NW toward the Novogeorgiyevka training area.

Item 8. USSURIYSK MILITARY COMPLEX

43 48N-131 58E

Ussuriysk is located 44 NM north of Vladivostok and 35 NM east of the Sino-Soviet border. The entire urban area shows extensive military development. The Order of Battle lists this area as the location of the 3rd Guards Mechanized Division, 40th Motorized Rifle Division and the Headquarters for the 5th Army.

Analysis of all available photography through summer 1963 reveals no apparent change in the status of the military complex as carried in existing reports. The following installations are identifiable: Ussuriysk Barracks, West (43 48N 131 56E), a Mechanized Division-sized installation containing extensive barracks, administrative/support buildings, storage, and vehicle maintenance facilities; and the Ussuriysk Army Barracks, North (43 50N 131 56E), a probable Mechanized Division-size installation containing in excess of 200 buildings including barracks, administrative buildings, support buildings, and storage areas. In addition, 9 small storage and support facilities, including probable ordnance storage, were observed in the immediate area. The size and configuration of the installation plus the associated activities, support the identification of the Ussuriysk Barracks, West as the location of a possible Tank Division and Ussuriysk Barracks, North as the location of a possible Motorized Rifle Division (see annotated photo and line drawing).

The only identifiable active training area noted was in association with Ussuriysk Barracks, West. Track activity extends 10 M. westward, crossing the Sui Fen (Suyfun) River by both bridge and probable fording point, to a training area, located at 43 45N-131 32E. The training area contains two moving target firing ranges and a possible small calibre anti-tank weapons range. The proximity of, and rail connection with, the Ussuriysk military installation to the Krasnopolye-Sergeyenka training area suggests probable affiliation.

Item 9. RAZDOLNOYE MILITARY INSTALLATION

43 33N-131 55E

The Razdolnoye military complex, located 14 NM south of Ussuriysk and 28 NM east of the Sino-Soviet border, is composed of the Razdolnoye barracks area and the Alekseyevka barracks area. The Order of Battle lists this area as the location of the 38th Artillery Division. The overall size of the installations indicates a division-sized unit (see annotated photo and line drawing).

TOP SECRET RUFT

TOP SECRET RUFF

The Rozdolnoye barracks area (43 30N-131 54E) consists of 18 probable multi-storied barracks-type buildings, a large multi-storied "U" shaped administrative/barracks-type building, 15 large conventional storage buildings, a probable vehicle maintenance and storage area, and numerous support buildings. A probable military storage area, located on the north edge of the installation, contains 8 probable multi-storied barracks, 8 large conventional storage buildings, and numerous support buildings.

The Aleksyevka barracks area (43 33N-131 55E) consists of 5 large probable multi-storied barracks-type buildings, 4 large conventional storage-type buildings, and 13 probable associated support buildings. Located immediately adjacent to the east is a probable military related storage area containing 10 storage/support building and a secured POL storage area containing at least 5 vertical tanks and 7 buried tanks. No vehicle training areas or firing ranges were identified in the vicinity of either of the two barracks areas.

Located one NM south of the Alekseyevka barracks area, at 43 32N-131 55E, is a large transmitting/receiving communications installation. The installation contains approximately 22 buildings, including probable billeting and administrative facilities, and 2 large antenna arrays. One array is oriented NE/SW and the other NNW/SSE.

Item 10. SHKOTOVO MILITARY INSTALLATION

43 19N-132 22E

Four probable military associated installations are located in the north sector of Shkotovo, 33 NM SE of Ussuriysk, 22 NM NE of Vladivostok, and 48 NM east of the Sino-Soviet border. The Order of Battle lists this area as the location of an unidentified Motorized Rifle Division. Additional collateral information indicates that Shkotovo is the Headquarters for the 40th Mechanized Division, 25th Army and various small support installations. Analysis of recent photography does not reveal any division-sized billeting or training areas in the vicinity of Shkotovo (see annotated photo and line drawing).

A probable military billeting and in-garrison training area is located on the NW edge of town. The installation contains 10 probable multi-storied, barracks-type buildings, 5 large multi-storied administrative/barracks-type buildings, 5 large conventional storage buildings, numerous support buildings, and a large oval track. The installation has the appearance of a possible military school.

TOP SECRET RUFF

An administrative/billeting installation is located on the west edge of town immediately southwest of the Ussuriysk-Nakhoda rail line. The installation contains 12 large multi-storied administrative/barracks-type buildings, 4 medium-size multi-storied barracks, numerous support buildings, and a possible exercise-training area.

A possible military storage area containing 4 large buildings and 10 smaller buildings is located NE of the administrative/billeting area, on the NE side of the rail line. A probable military storage and support installation, located in the north edge of town, contains 8 large probable storage buildings and approximately 15 small barracks-type buildings.

Item 11. SMOLYANINOVO MILITARY INSTALLATION 43 18N-132 28E

A large military installation is located in the northern sector of Smolyaninovo, 40 NM SE of Ussuriysk, 25 NM ENE of Vladivostok and 58 NM east of the Sino-Soviet border. The Order of Battle lists this area as the location of 40th Motorized Rifle Division. The size, configuration, and associated training, support the identification of this installation as a possible Motorized Rifle Division (see annotated photo and line drawing).

The various elements of the installation are dispersed throughout the town. The main element contains 18 probable multi-storied barracks, 4 large "U" shaped administrative buildings, 5 administrative/support buildings, 4 large probable vehicle storage sheds, a vehicle maintenance and storage area, approximately 30 storage buildings, numerous support buildings, and an athletic field. A possible communications site is located on the east edge of the installation. Two large, tracked vehicle, driver training courses are located on the south edge of the installation.

The northern half of the installation is primarily a billeting area. It contains in excess of 50 probable single-storied barracks-type buildings, 4 large administrative type buildings, approximately 20 support/storage buildings, and an athletic field. A secured probable ammo storage area containing one group of 4 storage buildings and a second group of 12 large storage buildings, is located NE of the billeting area. A possible vehicle maintenance and storage area is located west of the billeting area.

Item 12. BARABASH MILITARY INSTALLATION 43 12N-131 29E

A military installation is located on the NE edge of Barabash, 35 NM SW of Ussuriysk, 17 NM WNW of Vladivostok, and 14 NM east

TOP SECRET RWT

of the Sino-Soviet border. The Order of Battle lists this area as the location of the 17th Guards Motorized Rifle Division. The size, configurations and type of associated training activity supports identification as a Mechanized Division area (see annotated photo and line drawing).

The installation contains 12 large probable multi-storied barracks, 9 probable multi-storied barracks-type buildings, 3 multi-storied administrative/barracks-type buildings, 5 administrative buildings, 7 large storage buildings, approximately 20 support buildings and 2 vehicle maintenance and storage areas. Located SW of the main barracks area are a number of large conventional storage and support buildings which may be militarily associated. Located to the north of the installation is a support area and two extensive tracked vehicle driver training courses. The support area contains 14 probable single-story barracks-type buildings, 2 administrative/barracks-type buildings, 5 large conventional storage buildings, a secured storage area containing 2 buildings and a vehicle maintenance and storage area. Two armored firing ranges are located 7 NM south of Barabash and are connected by road to the installation.

ZANADVOROVKA MILITARY INSTALLATION

43 18N-131 37E

A military installation is located 9 NM north of Barabash on the NE edge of Zanadvorovka. The installation appears to be a mechanized regiment-sized unit (see annotated photo and line drawing).

The installation contains 6 large probable multi-storied, barracks-type buildings, 2 administrative-type buildings, 6 support/storage buildings and a small vehicle maintenance and support area. A support/storage area containing 11 building and a probable vehicle storage area is located adjacent to the SE of the installation. A moving target firing range and tracked vehicle driver training course is located 2.5 NM west of the installation.

Item 13. SLAVYANKA SUSPECT MILITARY INSTALLATION

42 52N-131 23E

A military installation is reportedly located on the south edge of Slavyanka, 60 NM SW of Ussuriysk, 27 NM south of Barabash, and 13 NM east of the Sino-Soviet border. The Order of Battle has no specific listing for this area. Although this installation does not appear to be integrated with the civilian activity in Slavyanka, it does not have the configuration or related activity commonly associated with military ground forces. It is therefore believed to serve a support function, possibly military, and not

TOP SECRET RWT

TOP SECRET RWT

to be of significance to the ground Order of Battle (see annotated photo and line drawing).

The installation contains 4 possible administrative/barracks buildings, 10 large possible storage buildings, a large open storage area with 4 buildings, a smaller open storage area with 3 large probable sheds, and 5 possible support/storage buildings. The area appears to be under construction. A group of approximately 12 buildings located in the southern sector of the town may provide administrative/billeting support to the installation. No military training activity was noted in the immediate vicinity.

Item 14. PESCHANAYA MILITARY INSTALLATION

42 46N-131 12E

A military installation is located at Peschanaya, 65 NM SW of Ussuriysk, 11 NM NE of Kraskino, and 10 NM SE of the Sino-Soviet border. The Order of Battle has no listing for Peschanaya. The apparent self-containment of this installation, the lack of association with other installations, and its size and configuration supports identification as a probable Border Security Regiment (see annotated photo and line drawing).

The installation consists of 5 probable multi-storied administrative/barracks buildings, 3 administrative/support buildings, a vehicle maintenance and storage area, 9 small support buildings and a secured storage area containing 3 buildings. A probable dependents housing area containing 50 probable single-story buildings and 2 support buildings is located immediately north of the main support area. A driver training course and a moving target firing range are located east of the installation.

Item 15. KRASKINO MILITARY INSTALLATION

42 42N-130 47E

A large military installation is located in the SW sector of Kraskino, 83 NM SW of Ussuriysk, 20 NM NNE of the North Korean border, and 8 NM SE of the Sino-Soviet border. The Order of Battle lists this area as the location of the 17th Guards Motorized Rifle Division. The size, configuration, and the degree and type of associated training support the identification of a Mechanized Division (see annotated photo and line drawing).

The installation contains 15 probable multi-storied, barracks-type buildings, 9 large "U" shaped administrative buildings, 8 large conventional storage buildings, a vehicle maintenance and storage area and numerous support buildings. A probable armored firing range and 4 secured storage areas are located one NM east of

TOP SECRET RWT

TOP SECRET RWT

Kraskino; and a probable anti-tank weapon firing range and driver training course are located 5 NM WNW of Kraskino (42 44N-130 40E). Three small, possibly military related, groupings of conventional storage buildings are located within the town.

A second military installation, of regimental size, is located 2 NM east of Kraskino at Zaysanovka (42 42N-130 50E). It contains 9 administrative/barracks-type buildings and 18 storage/support buildings. It appears to be a possible support facility for the nearby Kraskino Naval Base.

SACHITSA PROBABLE BORDER OUTPOST

42 35N-130 40E

A probable border outpost (Zastavy) is located 3.5 NM SW of Sachitsa, 9 NM SW of Kraskino and 2 NM east of the Sino-Soviet border. The Order of Battle has no specific listing for this area. The apparent self-containment and the presence of a well defined road pattern extending from it and paralleling the border trace support the identification of a probable border outpost.

The main billeting area contains over 60 small probable dependents housing buildings, a larger probable multi-storied administrative-type building, and approximately 10 support buildings. A probable vehicle maintenance and storage area is located 5 NM SW of the billeting area. It contains 6 probable vehicle sheds, 4 conventional storage buildings, and approximately 10 small support buildings. The network of roads which extends from the installation parallel to the border trace includes a possible border check-point located 3 NM NW of Sachitsa at a point where a road crosses the frontier (see photo enlargement).
